1. Introduction

In the framework of the **Pressure–Curvature Law of Gravity (PPC Law)**, gravity is interpreted as a manifestation of **pressure-induced curvature** within spacetime.
Mass not only bends spacetime through its energy density but also applies a **pressure field** upon it.
When this pressure varies dynamically, **Pressure Waves** arise — oscillations that propagate through the universal pressure field at the speed of light.

These waves are the physical expression of what General Relativity describes as gravitational waves.
Thus, *Pressure Waves* form the **dynamic extension** of the PPC Law of Gravity.

2. Theoretical Foundation

The PPC Law establishes that:

$$P_g = \rho c^2$$

The **pressure gradient** gives rise to a gravitational force:

$$F = \nabla P$$

In Einstein's formulation:

$$G_{\mu\nu} = \frac{8\pi G}{c^4} T_{\mu\nu}$$

$$T_{\mu\nu} = \left(\rho + \frac{p}{c^2}\right) u_\mu u_\nu + p g_{\mu\nu}$$

In the weak-field limit:

$$\nabla^2 \Phi = 4\pi G(\rho + 3p/c^2)$$

3. Formation of Pressure Waves

If the pressure or density field varies with time:

$$p = p(x,t), \quad \rho = \rho(x,$$

These are described by the classical wave equation:

$$\frac{\partial^2 \Phi}{\partial t^2} = c^2 \nabla^2 \Phi$$

4. Flow of PPC Law

Mass → Pressure → Force → Curvature → Pressure Waves in Spacetime

5. Physical Interpretation

Pressure Waves are **vibrations of the spacetime pressure field** created by mass-energy variations.
They carry curvature energy through the universe and manifest as detectable gravitational waves.

Under this interpretation:

- Gravity arises from **pressure-induced curvature**.
- Gravitational waves are **pressure waves** in spacetime.
- The PPC Law unifies mass, pressure, and curvature in a single causal chain.

6. Summary

> “Gravitational waves are pressure waves in spacetime — vibrations of the universal pressure field created by mass.”
> — *Pawan Upadhyay, 2025*

✔️ Paper Summary

This paper presents a new interpretation of gravitational waves as *Pressure Waves* — dynamic oscillations in spacetime's pressure field.
It extends Einstein's General Relativity by identifying pressure as the **physical mechanism** behind curvature formation, completing the causal sequence:
Mass → Pressure → Force → Curvature → Pressure Waves → Motion.
